# IronNet

Attack Assessment

Overview

IronNet was founded to more effectively secure enterprises, sectors, states, and nations against highly organized cyber adversaries and increasingly sophisticated attacks. IronNet solutions address the exponentially advancing cybersecurity threats hitting multiple companies at the same time. Today, our revolutionary Collective Defense approach enables enterprises to benefit from global, shared insights to defend against emerging threats in real time as a unified front.

What is the Attack Assessment?

Using our IronDefense network detection and response solution (NDR) solution and cyber solution engineers, **IronNet's attack assessment will provide:**

1

A better understanding of your network security and, as a result, peace of mind in knowing that attackers are not likely operating in your network undetected.

2

An after-action review, which our team will conduct with you to determine next steps to help keep your network secure.

3

Actionable insights into your cyber threat surface and potential bad actor activity in your enterprise network, as well as visibility into network cyber hygiene issues.

Scope

Pre-Deployment

STEPS

A. Understand network requirements

B. Discuss deployment options

C. Network accessibility and configuration

OBJECTIVES

Understand how IronNet will be deployed in your environment and the technical requirements needed to successfully run the Attack Assessment.

STEPS

A. Installation

B. Configuration & tuning

OBJECTIVES

Install and configure system into your network. Confirm network traffic and relevant log sources are flowing to IronNet.

Deployment

Analyze & Hunt

STEPS

A. Training

B. Threat hunting

OBJECTIVES

Progress to live monitoring of network traffic by end of this stage.

STEPS

› Deliver key findings report

OBJECTIVES

Review technical objectives and Attack Assessment outcomes with client executive sponsors.

Findings Review

Post-Attack Assessment

STEPS

A. Integrate with existing cybersecurity toolsets

B. Operationalize with existing workflows

OBJECTIVES

Integrate IronNet into your security stack and workflows.
